

PLANEXT 4U

P4U Super App

Product Requirements Document

Version 1.0 | March 2026 | CONFIDENTIAL

"One App. Every Need. Every Neighborhood."

1. Executive Summary

Planext 4u (P4U) is a next-generation Super App designed to serve as a unified digital platform for hyperlocal commerce, social interaction, service discovery, emergency assistance, and classified advertising. Targeting consumers and local businesses across India, P4U consolidates multiple daily-use digital experiences into a single, intelligent, and highly configurable application.

The platform is built around a microservices architecture with a domain-driven design approach, ensuring independent scalability of each business capability. The admin control panel enables real-time configuration of the user experience, including dynamic home screen layouts, feature visibility, RBAC, hierarchy management, and A/B testing of UI components, without requiring a mobile app update.

P4U is designed for a franchise model of operation, where Zonal Heads manage Master Franchises, which cascade down to Mini Franchises and Delivery Boys (MIC), enabling hyperlocal service delivery within defined geographic zones.

2. Product Overview

2.1 Vision

"One App. Every Need. Every Neighborhood." – P4U aspires to be the single app that every household in Tier 1 through Tier 3 cities in India needs, combining the best of e-commerce (Zepto/Meesho), services (Urban Company), social media (Instagram), classifieds (OLX), and emergency assistance.

2.2 Core Platforms

- User Mobile App (Android + iOS)
- Vendor Mobile App (Android + iOS)
- Delivery Partner App (Android)
- Admin Web Platform (Desktop-first, responsive)
- Public Web Storefront (Desktop + Mobile)

2.3 App Modules

Module	Description
Home	Dynamic, configurable home with widget builder
Shop / E-Commerce	Product listings, cart, checkout, seller discovery
Services	Service booking, provider search, scheduling
Socio	Social feed, posts, stories, follow, chat
Booking	Appointments, slots, ride/transport booking
Classified Ads	Post & browse ads with filters
Emergency	Ambulance, urgent contacts, SOS services
Admin Platform	Full control panel for app management

2.4 User Modes (Preference-Based)

Users can set a preferred mode that customizes their home screen experience and content prioritization. Modes can be switched at any time from the profile settings or home screen. Available modes include:

- E-Commerce Mode – prioritizes product listings, deals, and shopping categories
- Services Mode – prioritizes service providers, bookings, and nearby experts
- Social Mode – prioritizes social feed, stories, creators, and community
- Classified Mode – prioritizes ad listings, buy/sell categories
- Hybrid Mode – balanced experience (default)

The active mode is persisted server-side and synced across devices. Admin can control which modes are enabled per geography or user segment.

3. Goals & Success Metrics

3.1 Business Goals

- Achieve 100,000 registered users within 6 months of launch
- Onboard 5,000 verified vendors within 3 months
- Enable hyperlocal delivery within 60-minute SLAs
- Establish Franchise network across 10 cities in Phase 1
- Achieve GMV of INR 5 Cr/month within 12 months

3.2 Product Success Metrics

- App cold-start time < 3 seconds
- Home screen render time < 1.5 seconds
- User onboarding completion rate > 80%
- Vendor KYC approval rate > 70% (automated)
- App crash rate < 0.1%
- Push notification delivery rate > 95%
- Search result relevance score > 85%

4. System Architecture

4.1 Architecture Pattern: Microservices + Domain-Driven Design (DDD)

P4U adopts a Microservices Architecture with Domain-Driven Design to ensure each business capability is independently deployable, testable, and scalable. Each microservice owns its data store and communicates via well-defined APIs and event streams.

4.1.1 Microservice Catalog

Microservice	Responsibility
Identity Service	Auth, OTP, social login, JWT/refresh tokens
Onboarding Service	User & vendor registration, KYC workflow
Catalog Service	Products, services, categories, search indexing
Order Service	Cart, checkout, order lifecycle, returns
Payment Service	Gateway integration, refunds, wallet
Payout Service	Vendor settlements via Cashfree Payouts
Delivery Service	Delivery partner assignment, tracking, geo-zones
Notification Service	Push, SMS, in-app, email notifications
Media Service	Upload, encode, compress, stream videos/images
Social Service	Posts, stories, feed, comments, follows
Booking Service	Appointment slots, scheduling, ride booking
Classified Service	Ad posting, browsing, expiry management
Emergency Service	SOS contacts, ambulance provider registry
Admin Service	Configuration, widget builder, RBAC, hierarchy
Analytics Service	Usage metrics, dashboards, reporting
Audit Service	Compliance logs, KYC audit trail

4.2 API Gateway Layer

All client requests (mobile app, web) are routed through an API Gateway (AWS API Gateway or Kong). The gateway is responsible for:

- Authentication and JWT validation
- Rate limiting per user, per IP, and per endpoint
- Request routing to downstream microservices
- SSL termination
- API versioning (v1, v2)
- Request/response logging and tracing (OpenTelemetry)
- Circuit breaker pattern (Resilience4J / Hystrix)

4.3 Event-Driven Communication

Inter-service communication that is asynchronous uses Apache Kafka as the message broker. Key event topics include:

- user.registered – triggers onboarding notifications
- vendor.kyc.submitted – triggers compliance review
- order.placed – triggers inventory, delivery, and notification services
- payment.completed – triggers payout calculation
- media.uploaded – triggers encoding pipeline

4.4 Infrastructure & Deployment

- Container orchestration: Kubernetes (EKS or GKE)
- CI/CD: GitHub Actions + ArgoCD
- Service mesh: Istio (mTLS, traffic management)
- Monitoring: Prometheus + Grafana + ELK Stack
- Secrets management: AWS Secrets Manager / Vault
- CDN: CloudFront for static assets and media

4.5 Database Strategy

- PostgreSQL – transactional data (orders, payments, users)
- MongoDB – product catalog, vendor profiles, social content
- Redis – caching, session tokens, rate limit counters
- Elasticsearch – full-text search for products, services, classifieds
- SQLite (mobile) – offline local storage (syncd via background jobs)

5. Admin Platform

The Admin Platform is the central control center for the P4U Super App. It is a web-based application (desktop-first, responsive) that enables non-technical administrators to configure every aspect of the user-facing app without requiring a new app release.

5.1 Dynamic UI Builder (Drag & Drop Widget System)

The most critical differentiator of P4U's admin platform is the ability to configure the mobile app's home screen and inner screen layouts dynamically. This system works like a WYSIWYG CMS for the mobile app UI.

5.1.1 Widget Library

Admin can drag and drop the following widget types into any screen layout:

- Hero Banner Carousel – full-width swipeable banners with CTA buttons
- Category Grid – configurable rows/columns of category icons
- Product Carousel – horizontal scroll of product cards (configurable data source)
- Flash Sale Timer – countdown with product list
- Service Provider Grid – nearby service provider cards
- Social Feed Preview – top posts from Socio module
- Emergency Quick Access – SOS/Ambulance/Urgent buttons
- Offer Chip Strip – horizontal pill badges for offers
- Map Widget – nearby seller/service map view
- Trending Search Bar – pre-filled search suggestions
- Brand Story Reel – short video stories from brands/vendors
- Mode Switcher Toggle – quick switch between user modes
- Notification Bell Strip – unread alerts inline

5.1.2 Layout Configuration

- Admin selects a screen (Home, Category, Vendor Profile, etc.)
- Drag widgets from the library panel into the layout canvas
- Reorder widgets via drag-and-drop
- Configure each widget: data source, max items, sort order, filters
- Preview the layout in device frame (iPhone / Android mockup)
- Publish changes – app fetches updated layout on next launch or background refresh
- Schedule layouts for specific date/time ranges (e.g., Diwali sale layout)
- A/B test two layouts with percentage traffic split

5.1.3 Screen Targeting Rules

- Target layouts by: User Type (User/Vendor), KYC Status, User Mode, Geography (City/Zone), User Segment (New/Returning/VIP)

5.2 Hierarchy Management (Tree Structure)

Admin can build and manage the operational hierarchy of P4U as an interactive tree with unlimited levels. The hierarchy mirrors the franchise/official model and drives data scoping, reporting, and access control.

5.2.1 Hierarchy Builder

- Root node: Head Office / Super Admin
- Level 1: Zonal Head / Marketing Manager (MAS) – covers 50 KM radius
- Level 2: Area Manager – sub-zone management
- Level 3: Field Officers (MIN) – local field coordination
- Level 4: Delivery Boys (MIC) – last-mile delivery

Franchise Parallel Track:

- Master Franchise (Zonal Head equivalent, 50 KM radius)
- Mini Franchise (1.25 KM from Master) – manages Delivery Boys within 0.5 KM

5.2.2 Node Operations

- Create new node at any level with name, type, responsible person, geography
- Assign a user/employee to a node
- Map geographic zones (polygon or radius) to each node
- Move nodes (re-parent) across the tree
- Deactivate/archive nodes without deleting historical data
- Bulk-import hierarchy via CSV

5.2.3 Data Scoping via Hierarchy

Every piece of data (orders, vendors, deliveries, analytics) is tagged to a node. Reports and dashboards automatically scope data to the logged-in admin's node and all descendants. A Zonal Head sees only data within their zone; Super Admin sees all.

5.3 RBAC & Job Role Management

Role-Based Access Control (RBAC) ensures every admin user sees and can do only what their job role permits. Job roles are fully configurable from the admin portal.

5.3.1 Pre-built Roles

Role	Module Access	Permissions	Data Scope
Super Admin	All modules	Full CRUD + approvals	Full access
Operations Admin	Orders, KYC, Delivery	View + limited edit	Restricted
Compliance Admin	KYC, Audit logs	View + approve	No edit
Marketing Manager	Banners, Campaigns	Create + edit	Limited
Field Officer	Delivery, Geo zones	View + update	Limited
Zonal Head / MAS	Zone-level data	View + report	Zone only
Area Manager	Area-level data	View + coordinate	Area only

5.3.2 Custom Role Builder

- Admin defines a role name and description
- Select modules: toggle visibility per module
- Per module: set permissions at screen level and action level (View / Create / Edit / Delete / Approve / Export)

- Assign data scope: All / Zone / Area / Self
- Assign the role to one or more users
- Roles can be cloned, modified, and versioned

5.4 Vendor & User Management

- View all registered users and vendors with filters (status, KYC level, geography, date)
- KYC review queue – approve, reject, flag for manual review
- Edit vendor service zones and delivery radius
- Suspend, ban, or reinstate accounts
- View full audit trail per user
- Bulk actions: export, notification blast, badge assignment

5.5 Content & Banner Management

- Upload and manage banners with targeting rules
- Schedule campaigns with start/end date
- Category icon management – upload icons, reorder categories
- Emergency contact directory management – add/edit ambulance providers
- Notification campaigns – compose push notifications with audience segmentation

5.6 Analytics Dashboard

- Real-time stats: active users, orders in progress, active deliveries
- GMV, AOV, conversion rate by module and geography
- Vendor performance: listing count, order volume, rating
- KYC funnel: submission → verification rate
- Hierarchy drill-down: click any node to see its sub-zone stats
- Export reports to CSV / PDF

6. Mobile App – Functional Requirements

6.1 Onboarding & KYC

6.1.1 Registration Flow – End User

1. App Install + Splash Screen (P4U brand teal with logo)
2. Registration: Full Name, Mobile (OTP), Email (optional), Referral Code
3. OTP Verification (6-digit, 60-sec resend)
4. Profile Setup: Profile Photo, Gender, DOB, Preferred Language
5. Terms & Conditions (scroll-to-accept)
6. Address Setup (GPS auto-detect or manual entry)
7. Mode Selection – choose primary app mode
8. Post-registration popup: Occupation, Notification consent

6.1.2 Registration Flow – Vendor

9. Business Name, Owner Name, DOB, Gender, Mobile (OTP)
10. Category & Subcategory selection
11. Terms & Vendor Agreement (PDF preview, scroll required)
12. OTP Verification
13. KYC Submission: PAN, Aadhaar (OCR via HyperVerge), GST (if applicable), Bank Account (Penny Drop), Live Selfie (liveness check), Business Address Proof, GPS capture at shop location
14. KYC Status Tracking: Not Started → In Progress → Submitted → Verified / Rejected
15. Dashboard access (limited until KYC approved)

6.1.3 KYC Fields & Access Gating

Field	Applicable To	Mandatory	Stage
Mobile OTP verification	Both	Yes	Registration
Full Name	Both	Yes	Registration
Profile Photo	Both	Yes	Profile Setup
Aadhaar / PAN Upload	Vendor (Mandatory), User (Full KYC)	Conditional	Post Registration
Aadhaar OCR Extraction	Vendor	Yes	KYC Module
Live Selfie / Liveness Check	Both	Full KYC	KYC Module
GST Number + Validation	Vendor	If applicable	Business KYC
GST Certificate Upload	Vendor	If GST registered	Business KYC
Bank Account + Penny Drop	Vendor	Yes	Payout Activation
Business Address Proof	Vendor	Yes	Business KYC

GPS Capture (Shop Location)	Vendor	Yes	Business KYC
-----------------------------	--------	-----	--------------

6.1.4 Feature Access Matrix

Feature	No KYC	Partial KYC	Full KYC
Browse content & products	✓	✓	✓
View vendor profiles	✓	✓	✓
Social feed view	✓	✓	✓
Create social posts	✗	✓	✓
Chat / Messaging	✗	✗	✓
Place orders	✗	✓	✓
Book services	✗	✓	✓
Post classified ads	✗	✓	✓
Reporting / Disputes	✗	✗	✓
Vendor – List products	N/A	N/A	Vendor Full KYC Only

6.2 Home Screen (Dynamic)

The home screen is 100% driven by the server-side widget configuration from the Admin UI Builder. The app fetches the active layout on launch and caches it locally. Changes from admin are reflected within 60 seconds (configurable TTL).

6.2.1 Static Elements (Always Present)

- Top bar: Location display (tap to change), Loyalty coin balance, Cart icon, Profile avatar
- Search bar with voice input and trending suggestions
- Category quick-scroll (horizontal)
- Bottom navigation: Home, Shop, Services, Socio, Booking, Classified

6.2.2 Dynamic Widget Zone

- Widgets rendered in the order configured by admin
- Widgets can be shown/hidden based on user mode, segment, and KYC status
- Emergency red CTA button always pinned above the fold (cannot be hidden for safety)
- Home screen adapts to User Mode preference without reloading

6.3 Shop / E-Commerce Module

- Seller listing page with filters (distance, rating, category, delivery time, minimum order)
- Seller profile page: banner, logo, description, products, ratings
- Product listing with search, filters, sort (price, popularity, new)

- Product detail: images (zoom), description, variants, stock status, seller info
- Add to cart with quantity control; cart persists across sessions
- Checkout: address selection, coupon code, payment method, order summary
- Order tracking: real-time status with map for hyperlocal deliveries
- Order history and returns/refund request
- Loyalty points earned per purchase (configurable by admin)
- Wishlist / Save for later

6.4 Services Module

- Browse service categories: Plumbing, Electrical, Salon, Health, Cleaning, etc.
- Service provider cards: name, rating, distance, price range, availability
- Provider profile: portfolio photos, reviews, certifications, available slots
- Booking flow: select service → choose slot → confirm → pay (advance/on-site)
- Real-time provider tracking on Google Maps for at-home services
- Post-service review and rating
- Cancellation policy and refund handling
- Admin-configurable service categories and sub-categories

6.5 Socio (Social Media Module)

- Scrollable feed of posts (images, videos, short reels) from followed users and vendors
- Create post: text, images (multi-select), short video (max 90 seconds)
- Stories: 24-hour disappearing content with viewers list
- Like, comment, share, save, and report posts
- Follow / Unfollow users and vendors
- Discover page: trending posts, suggested users, hashtag search
- Vendor branded posts appear in feed with 'Shop Now' CTA
- In-app messaging (Full KYC required): text, image, emoji
- Video streaming: adaptive bitrate (HLS/DASH), preload next video, low-latency
- Content moderation: AI-assisted flagging + admin review queue

6.6 Booking Module

- Ride/Transport booking: source-destination, vehicle type, fare estimate
- Google Maps integration: route preview, driver tracking, ETA
- Appointment booking: doctors, salons, restaurants, labs
- Slot management: provider sets available slots; user picks and pays
- Booking status: Confirmed, In-Progress, Completed, Cancelled
- Reminder push notifications 1 hour before booking

6.7 Classified Ads Module

- Post ad: category, title, description, price, images, location
- Browse ads with filters: category, price range, distance, date posted
- Contact seller: tap to call or chat (Full KYC required for chat)
- Ad expiry: configurable by admin (default 30 days)
- Promoted ads: sellers can pay to boost ad visibility

- Flagging and reporting system for inappropriate ads

6.8 Emergency Module

The Emergency module is a safety-critical feature accessible from the home screen red CTA. It cannot be hidden via the widget builder.

- Two tabs: Ambulance (pre-verified ambulance service providers) and Urgent (other emergency contacts)
- Each contact shows: Provider name, service type, call button, message button
- Admin manages the emergency contact directory from the admin platform
- SOS one-tap: sends user GPS location to pre-configured emergency contact
- Works in partial offline mode (cached contacts available without internet)

6.9 Offline Mode & Synchronization

- Local SQLite database (Android Room / iOS Core Data) for offline storage
- Cached data: last-loaded home screen layout, recent product views, order history, emergency contacts, addresses
- Offline actions queued: add to wishlist, draft posts, saved searches – synced when online
- Background sync using WorkManager (Android) and BGTaskScheduler (iOS)
- Conflict resolution: server data takes precedence on sync conflicts
- Visual offline indicator banner when network is unavailable
- Offline-first search: recent and cached results shown while fetching live data

7. Media Handling & Streaming

7.1 Image Handling

- Images compressed to WebP format (75-85% quality) on upload via backend pipeline
- Multiple resolutions generated: thumbnail (80px), card (400px), full (1080px)
- Served via CloudFront CDN with cache-control headers
- Progressive JPEG loading for product images
- Lazy loading in lists and feeds

7.2 Video Encoding Pipeline

- Raw video uploaded to S3 via pre-signed URL (chunked upload for large files)
- Transcoding via FFmpeg or AWS Elastic Transcoder / Cloudflare Stream
- Output formats: 240p, 480p, 720p, 1080p (HLS segments + DASH manifest)
- Adaptive bitrate streaming: player auto-selects quality based on connection speed
- Thumbnail generated at 0s, 5s, and 50% of video duration
- Video stored in S3; HLS manifest URL served to client
- CDN caches HLS segments for minimal latency on repeat views

7.3 Social Video Experience

- Preload next video when current video is at 70% played
- Auto-play on scroll into view (muted by default)
- Loading placeholder with animated shimmer
- Bandwidth cap mode: users can disable autoplay or limit to Wi-Fi only

8. Third-Party Integrations

Integration	Purpose
HyperVerge	Automated KYC – ID OCR, face match, liveness detection
Cashfree Payments	Payment gateway – UPI, cards, net banking, wallets
Cashfree Payouts	Vendor settlements, commission disbursement
Google Maps API	Location search, delivery radius, geo-zones, route tracking
Firebase Cloud Messaging	Push notifications (Android + iOS)
Apple APNs	iOS push notifications
AWS S3 / Cloudfront	Media storage with CDN for fast delivery
FFmpeg / Cloudflare Stream	Video encoding, transcoding, adaptive streaming (HLS/DASH)
Twilio / MSG91	OTP SMS delivery
Redis	Caching, session management, rate limiting
Elasticsearch	Full-text product/service/classified search
Apache Kafka	Event streaming between microservices

8.1 HyperVerge (KYC Automation)

- SDK integrated in Vendor App for in-app document scanning
- OCR extraction of Aadhaar, PAN, GST certificate
- Face match between selfie and ID document photo
- Liveness check (blink, nod, random gesture prompt)
- GST name match score: $\geq 85\%$ auto-approved; $< 85\%$ queued for manual review
- Failure handling: blurry image $\rightarrow$ re-upload prompt; mismatch $\rightarrow$ manual review

8.2 Cashfree – Payment Gateway

- Supported modes: UPI, Debit/Credit Cards, Net Banking, Wallets (Paytm, PhonePe)
- Tokenized card storage for repeat checkout
- 3D Secure authentication
- Refund API integration for returns
- Reconciliation feed for finance team

8.3 Cashfree – Payouts (Vendor Settlements)

- Commission deduction calculated per order at settlement
- Payout schedule: configurable (daily/weekly) by admin
- Bank account verified via Penny Drop before first payout
- Payout dashboard: vendor sees settlement history, upcoming payouts, TDS deductions
- Bulk payout API used for processing multiple vendor settlements

8.4 Google Maps

- Places Autocomplete for address input
- Geocoding / Reverse Geocoding for geo-tagging
- Distance Matrix for delivery time estimates
- Delivery tracking: real-time driver location on map (WebSocket)
- Vendor discovery: 'Near Me' search using PostGIS / Geo queries
- Zone polygon drawing in admin hierarchy builder

9. Franchise & Hierarchy Operational Model

9.1 Franchise Model

P4U operates a two-track operational hierarchy that mirrors both a franchise model and an official employment hierarchy. Both tracks converge at the Zonal Head level.

9.1.1 Franchise Track

- Zonal Head (Master Franchise): manages a 50 KM radius zone
- Mini Franchise: operates within 1.25 KM of Master Franchise hub
- Delivery Boys (MIC): each Mini Franchise manages Delivery Boys within 0.5 KM
- Multiple Mini Franchises (up to 10+) can operate under one Zonal Head

9.1.2 Official Hierarchy Track

- Zonal Head / Marketing Manager (MAS): central authority per zone
- Area Managers: manage sub-zones; multiple per Zonal Head
- Field Officers (MIN): coordinate delivery and ground operations
- Delivery Boys (MIC): report to Field Officers

9.2 Platform Support for Hierarchy

- Each franchise/field unit is a node in the admin hierarchy tree
- Geo-zones mapped to each node (radius or polygon via Google Maps)
- Orders automatically routed to the Mini Franchise / Field Officer serving the delivery pin code
- Performance reports scoped to each node; roll-up to parent level
- Commission structures defined per hierarchy level by admin

10. Push Notifications

10.1 Notification Types

- Transactional: order placed, order shipped, order delivered, payment received
- Promotional: flash sale started, new vendor nearby, coupon issued
- KYC: verification approved, document rejection with reason
- Social: new follower, post liked, comment received, message received
- Emergency: SOS acknowledgment
- Booking: confirmation, reminder (1 hour before), provider en-route

10.2 Delivery Stack

- Android: Firebase Cloud Messaging (FCM)
- iOS: Apple Push Notification Service (APNs) via FCM or direct
- In-app notification center with read/unread state
- Deep links: notification tap navigates to relevant screen

10.3 Admin Controls

- Compose and schedule notification campaigns from admin
- Audience filters: user type, KYC status, geography, last active date, user mode
- Opt-out management: users can unsubscribe from promotional notifications
- Delivery rate and open rate analytics in admin dashboard

11. Non-Functional Requirements

Category	Requirement
Performance	App cold start < 3s; API P95 < 500ms; home screen render < 1.5s
Scalability	Horizontal scaling per microservice; auto-scale on 70% CPU
Availability	99.9% uptime SLA; zero-downtime deployments
Security	AES-256 encryption at rest; TLS 1.3 in transit; OWASP Top 10 compliance
Data Privacy	DPDP Act 2023 compliant; Aadhaar data encrypted + masked in UI
Offline Mode	SQLite / Room local DB; background sync via WorkManager / BGTask
Media Performance	Videos load in < 2s on 4G; adaptive bitrate (240p–1080p)
Rate Limiting	API Gateway enforces per-user and per-IP rate limits
Accessibility	WCAG 2.1 AA; support for regional languages
Audit Trail	All admin actions and KYC events logged with timestamp + actor

11.1 Security Requirements

- All API endpoints require JWT Bearer token authentication
- Refresh token rotation with sliding expiration
- Aadhaar data encrypted with AES-256; never stored in plain text
- Aadhaar number masked in all UI displays (last 4 digits visible)
- Selfie images used only for KYC verification; not accessible publicly
- Admin actions logged with actor identity, timestamp, and IP address
- OWASP Mobile Top 10 compliance for the mobile apps
- SSL certificate pinning in mobile apps
- Input validation on all API endpoints to prevent SQL injection and XSS

11.2 Rate Limiting Strategy

- OTP send: max 3 per phone per 10 minutes
- Login attempts: max 5 per IP per minute; CAPTCHA after 3 failures
- Search API: 60 requests/minute per user
- Media upload: 10 concurrent uploads per vendor
- Admin API: 100 requests/minute per admin user

12. Out of Scope – Phase 1

- Warehouse management and inventory tracking system
- Multi-language content management (Phase 2)
- Subscription / membership plan billing for vendors
- Advanced ML-based recommendation engine
- Web-based vendor storefront (custom domain)
- International expansion (only India in Phase 1)
- In-app ads marketplace (classified promotion is in scope, full ad network is Phase 2)

13. Acceptance Criteria

13.1 Onboarding

- User can complete registration in under 2 minutes
- Vendor KYC submission completes without requiring external assistance
- OTP delivered within 10 seconds on Airtel, Jio, BSNL networks
- HyperVerge returns verification result within 30 seconds (95th percentile)

13.2 Admin Platform

- Admin can publish a new home screen layout within 5 minutes without writing code
- Layout changes reflected on the app within 60 seconds of publishing
- Hierarchy tree supports at least 5 levels with 500+ nodes without performance degradation
- RBAC correctly restricts unauthorized access across all modules

13.3 Payments & Payouts

- Payment success rate > 98% for UPI and card transactions
- Vendor payout processed within defined settlement period with correct commission deduction
- Penny Drop confirmation received within 24 hours

13.4 Media & Streaming

- Video starts playing within 2 seconds on a 4G connection
- Image load time < 500ms for product cards via CDN
- Video upload and transcoding completes within 2 minutes for a 60-second clip

13.5 Offline Mode

- App displays cached home screen and emergency contacts without internet
- Offline actions (wishlist, saved searches) sync successfully when connectivity is restored

14. Document Revision History

Version	Date	Changes	Author
1.0	March 2026	Initial PRD draft	Product Team

END OF DOCUMENT
